

ENHANCE CONSIGNMENT OPERATIONS AND ACHIEVE GREATER EFFICIENCY

iRely's Consignment ERP System is tailored for the unique operational needs of Consignment fuel businesses. It provides a comprehensive suite of features that streamline the processing of a Consignment End-of-Day. It is an automation that quantifies Fuel Sales, Methods of Payments, Dealer Commissions, Inventory, Bank Deposit/Draft, and finalizes the End-of-Day in our A/P and A/R Modules.

QUANTIFY THE METHODS OF PAYMENTS

Captures and categorizes all payment methods, offering valuable insights into transaction trends and customer payment behaviors.

CALCULATE DEALER COMMISSIONS

Automatically calculates commissions for Dealers, which can be based on percentage of margin or cents per gallon, ensuring timely and accurate compensation for their sales efforts.

CALCULATE BANK DEPOSIT OR DRAFT

Simplifies the process of reconciliation between you and the dealer by automatically calculating the bank deposit/draft required by End-of-Day. This saves time and reduces errors.

AVOID STOCK OVERRAGES AND RUNOUTS

Inventory is automatically managed through the processing of the End-of-Day and the receipt of tank level readings from the automatic tank gages.

POSTING OF END-OF-DAY

Efficiently posts daily transactions, ensuring that all sales and inventory changes are accurately recorded and reported.

OVERVIEW OF THE CONSIGNMENT PROCESS

End-of-Day Operations

At the close of business, the cash register performs an End-of-Day operation to consolidate and finalize all transactions.

Data Retrieval by IRELY

The iRely system automatically retrieves the XML files from the cash register, which contain detailed records of the day's transactions.

Transaction File Parsing

The XML files are then parsed to extract and process the transaction data, ensuring accurate recording and reporting of the day's sales for the Consignment process.

EFFICIENCY UNLEASHED

Time-Saving: Centralized setup and review processes save valuable time and reduce manual effort.

Enhanced Revenue: The system automatically and accurately accounts for fuel discounts and fees, passing them to the Dealer when configured, thereby increasing overall revenue.

Improved Accuracy: Advanced algorithms validate fuel sales data, ensuring complete and correct processing.

Flexibility: Allows for negative inventory levels to accommodate delayed fuel delivery paperwork, maintaining uninterrupted operations. The automation process is configurable at the store level giving you precise control over how commissions and discounts are calculated, and how processing results are handled in A/R and A/P.

Informative Reporting: Comprehensive Site Status Screen and Polling Status Reports provide insights into store processing status.
